COVID-19 AND THE LIGHTING INDUSTRY • ERCO ECLIPSE REVIEWED • NEW PRODUCTS

Shining Beacon

A dramatic lighting scheme, with fixtures from Linea Light Group, transforms the new Oman Telecommunications Company headquarters into a shining landmark after dark.

Oman Telecommunications Company is the primary internet services provider in the country. Its new headquarters, located in the Madinat Irfan Business Park, was developed with the Omani tourism board OMRAN and stands out for its wavy, overlapping lines, which draw their inspiration from the traditional local headgear.

The outdoor lighting design curated by Visual Energy, implemented products and technologies from Linea Light Group and set out to light the external architecture in a functional way in order to give it a unique and unforgettable visual impact. The structure of the building is crossed by a Linea Light Group custom Rubber 3D Bend, which is DMX managed, thereby providing the ability to calibrate the intensity and colour of the light as desired – based on the different needs.

In order to even out the perimeter of the structure, Linea Light Group's Ryo was selected, a bollard with minimalistic appearance and in single and double emission versions. Used to provide the correct support for directing guests and users, Ryo guarantees complete freedom of movement after sunset.

Last, but not least, to illuminate and emphasise the vertical aspect of the building, Linea Light Group's Suelo uplights with flood optics were chosen, whereas for the fountain adjacent to the entrance, the submerged uplight Admiral was selected, specific for pools and underwater environments, characterised by AquaStop technology, an anti-intake system for the power cables, which are thereby protected from water and humidity. ■
