Musa By Lapitec

Lapitec® is the world's only sintered stone certified by the European Commission, offering a timeless, full body material for both interior and exterior projects. It is made from the purest minerals found on Earth and can be used in a number of ways, including paving areas.

This Musa collection offers a new take on veining, which runs the whole way through each slab; the veining can be seen on the surface and throughout the thickness of each slab and, above all, in the heart of the material. Purity, versatility and full-bodied solidness in a single collection: a revolution that breaks down all barriers.

Graphit by Listone Giordano

Graphit is a wooden flooring product created by Listone Giordano via an innovative production process. Graphite offers a new textured look as a result of an industrial process, with some manual interventions, which involve a pigmented base on which a graphite powder paste is applied and completed with the application of a protective finishing layer of opaque oil. This overall treatment significantly affects the chromatic effect of the surface enhanced by a greater depth of pigment and at the same time the naturalness and transparency of the grain. A colour palette ranging from grey to more intense shades to black has demonstrated optimal resistance to the physiological process of colour oxidation (once exposed to UV light).
