MATTER COMES TO LIFE

A journey in the flow of time, matter which becomes the memory of the universe and transforms into a living surface, a silent witness to epochs past and those yet to come. Osmos is an invitation to the contemplation and rediscovery of every detail, where beauty is born of imperfection: matter takes on life and is regenerated with a completely new appearance, full of meaning.

Osmos recounts an innovative interpretation of concrete, where precious marks are stratified and give life to an organic graphic design, both deep and textural, which conveys a surprising hybrid effect. The collection is visually rich and particularly detailed on closer viewing, featuring a surface marked by marble veining, mineral inclusions, and elements of nature.
